

# FriloTech

Seamless and Sustainable Cold Chain Solutions

## Pharma

### COVID-19 solutions

The program offers solutions for shipping vaccines. It includes options ranging from small distribution boxes to full pallet boxes.

All boxes are qualified for transport durations of up to 72 hours.

**-70°C, -20°C, +2°C, +8°C**

### Pre-qualified solutions

Our pre-qualified system solutions enable the safe and rapid shipment of pharmaceuticals.

These solutions support transport durations of 24, 48, 72, 96, or 120 hours.

**+2°C/+8°C, +15°C/+25°C, deep frozen**

### Pallet boxes

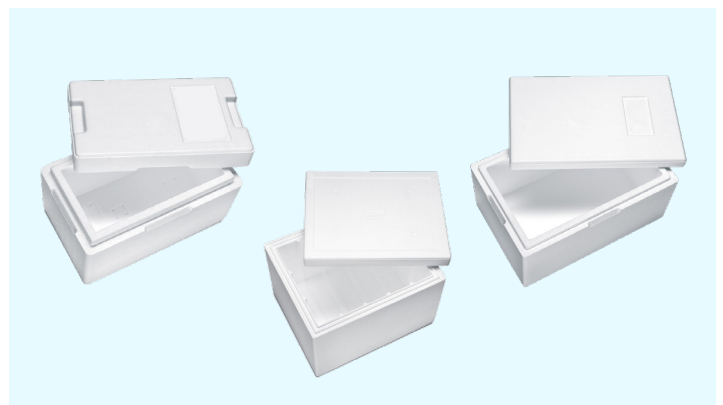

For larger shipments to the same destination, we offer various transport solutions using large thermo boxes and pallet boxes. All thermo boxes are designed to ensure safe transport, including by air. They are available in half-pallet, full-pallet, and XXL sizes.

**+2/8°C, +15/+25°C, +5/+25°C, +5/-18°C**

### STANDARD Boxes

If you need standard thermo boxes for shipping temperature-sensitive products, we offer over 35 different sizes, ranging from 1.5 to 101 liters of product space.

We provide expert advice on **EPS, NEOPOR, EPP, and XPS** materials. For specialized requirements, we also work with **VIP and HIP insulation** (vacuum insulating panels and high insulating panels).

## Dry ice shipper

If you are looking for high-quality thermo boxes suitable for dry ice shipments, we offer a variety of sizes to choose from. Our TH series is qualified for **up to 72 hours** of shipping and tested according to AFNOR temperature profiles. These dry ice boxes feature a durable outer cardboard box with a convenient carrying handle, making them easy to handle.

## CL & DRY ICE shippers

Designed and developed for multiple use. CL and dry ice boxes specially designed for distribution of medicines to pharmacies, internal logistics in hospitals, shipments of particularly temperature sensitive medicines etc. The boxes are based on the latest PCM technology (Phase Changing material).

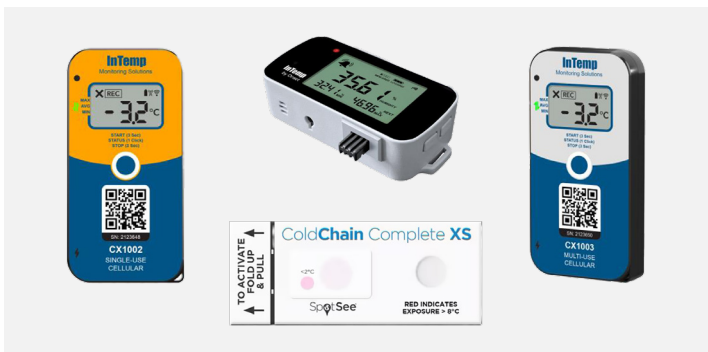

**+2°C/+8°C, +15°C/+25°C, deep frozen**

## Temperature loggers and indicators

Our range of loggers emphasizes quality and ease of use. We offer a wide selection of single-use and multi-use loggers for both temperature and humidity measurements, suitable for freight and permanent installations such as freezers and refrigerators.

Our products include temperature indicators, as well as USB, Bluetooth, GPS, GPRS, and WiFi loggers.

## Gelpacks and PCM/cooling elements

Gelpacks provide a cost-effective alternative to expensive refrigerated trucks, suitable for transporting a wide range of temperature-sensitive products such as food, lab samples, and medicine.

At our facility, we develop and manufacture high-performance PCM (phase-changing material) plates and cooling elements for both positive and negative temperature ranges.

One of our goals is to develop environmentally friendly cooling solutions.

Low Co<sup>2</sup> footprint due to our development and production in Denmark.
